

Shrink Film Solves Outdoor Storage Problem, Saves Time, Money, and Improves Image for Metal Fabricator

Automotive metal fabricator succeeds in solving government regulations puzzle as well as protecting their expensive metal dies. Easy to use Intercept™ Shrink Film is the long-term solution for these critical concerns.

Braintree, MA (PR.com) October 24,
2008

A well-respected automotive metal fabricator needed a solution to comply with governmental regulations regarding rust and oil-soiled water runoff from their outdoor-stored dies into nearby wetlands. In addition, they needed a strategy to protect their stored assets. When corrosion is stripped off a die in preparation for work, metal is lost. That creates a loss of definition and strength. At some point, the worn die would need to be replaced - an unwelcome expenditure.

Outdoor storage garages may have helped, but the expense was too great. Instead, they made the decision to shrink wrap all their 1000 dies in Intercept™ Shrink Film. Now, as dies are needed they are opened (the used Intercept Shrink Film can be tossed into the polyethylene waste stream), prepared in a lot less time, utilized, and are packaged in the Intercept Shrink Film and placed for long-term, outdoor protection. Problem solved.

An added benefit is that previously managers, employees, neighbors and visiting customers would see rusting, corroding metal equipment wasting away in outdoor storage areas. (The problem does not occur with just metal; plastic and rubber degrades also, becoming brittle with atmospheric exposure and easily accumulating dirt and stains.) Now all the outdoor stored items are wrapped neatly, in white plastic packages, making for a much better company appearance.

“Now all the outdoor stored items are wrapped neatly in Intercept Shrink Film and placed for long-term outdoor storage. Problem solved.”

Intercept Shrink Film is a multi-structured film with UV and moisture barrier built in and the Intercept inside layer, which provides a corrosive gas barrier. The sacrificial long-term Intercept Technology form of corrosion protection is continually working. It reacts with and neutralizes atmospheric gases such as sulfur, chlorine, nitrous groups,
